

## **AICT LAB PROJECT (DEMO)**

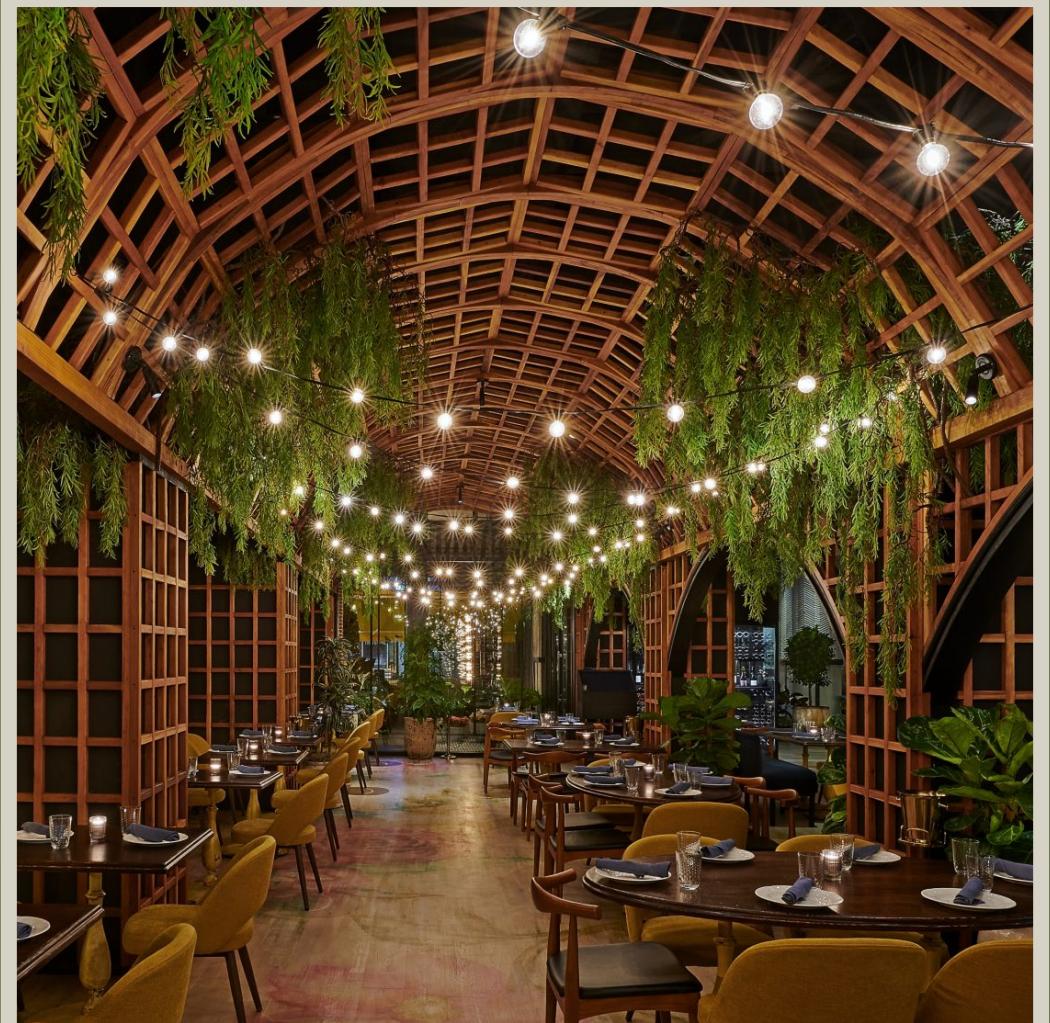

### **TITLE: RESTAURANT MENU DESIGN**

- **PRESENTED BY:** IFRA ABDULLAH KHAN

**ROLL NO.:** 242719

**CLASS:** BSCS-1-A

**INSTRUCTOR:** Mr. QAISAR MANZOOR

## **Changes Made:**

1. Made the "**Restaurant**" button in the header section clickable and connected it to the *index.html page*, which serves as the home page.
2. Added **ratings** for the entire menu and included an "**Add to Cart**" option, allowing customers to place orders. Customers can also remove items from the cart, and the *total amount* is displayed along with the selected items.
3. Added a "**Cancel Reservation**" button on the booking page. After completing a reservation, customers can see the "*Book a Table*" option again.
4. On the *review page*, customer reviews and ratings for the restaurant are now displayed at the bottom of the page, or below the review form, after being submitted.
5. On the contact page, once a message or query is submitted, a confirmation message appears stating, "*Your message has been delivered to us. We will contact you as soon as possible.*" Below this message, a button labeled "**Return to Home Page**" is displayed and linked to the *index.html page*.

## **PROJECT OVERVIEW :**

### **Overview of the Restaurant Menu Website**

This project is a **Restaurant Menu Website** designed to provide a **seamless experience** for customers by allowing them to:

View the menu and add dishes to a cart, with a dynamically updating total bill.

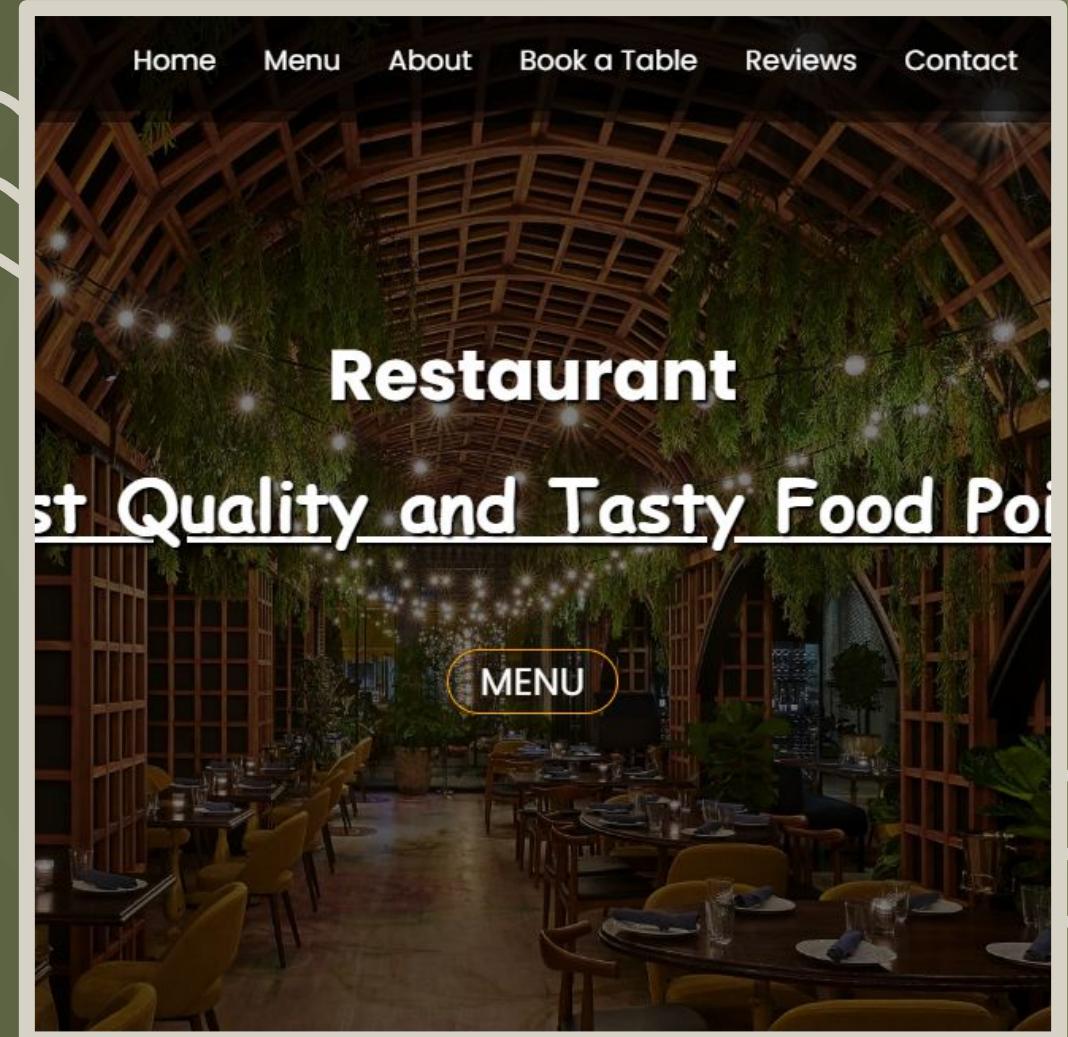

Submit reviews for dishes and view existing ratings and feedback.

Make table reservations and cancel them if needed.

Contact the restaurant for inquiries, feedback, or assistance.

## INDEX PAGE (INDEX.HTML)

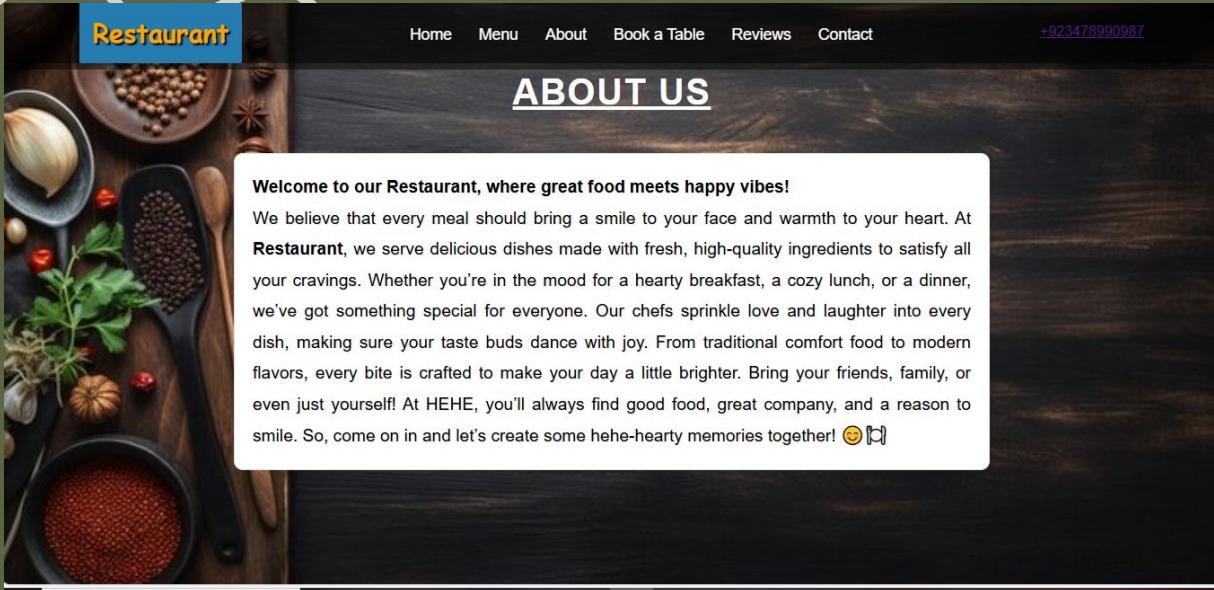

1. It consists of the header which contains the different pages such as home, menu, about, book a table, reviews and contact .
2. The restaurant button in the header section is clickable.
3. Below the title, there is another menu button for the customers.
4. This home page consists of a beautiful background picture.

## **MENU PAGE( menu.html)**

- **Menu & Cart System:**
- Customers can browse the menu and click on dishes to add them to their cart .
- The cart tracks selected items along with their prices and dynamically calculates the total bill .
- Customers can remove items from the cart before proceeding to checkout.

## ABOUT PAGE (ABOUT.HTML)

1. The "About" page welcomes visitors to Restaurant, highlighting its focus on great food and a cheerful atmosphere where every meal brings joy.
2. It also contains a background image that is added by the css (html and css file are linked).

## BOOK A TABLE (booking.html)

### Reservation System:

1. Customers can book a table by selecting:

Date

Time

Number of Guests

2. After successful booking, a confirmation message will be displayed.

3. Customers will have the option to cancel their reservation if they change their plans.

The screenshot shows a restaurant website with a dark background featuring a blurred landscape image. At the top, there is a navigation bar with links: Home, Menu, About, Book a Table, Reviews, Contact, and Log In. Below the navigation bar, there is a large "Reserve your Table" button. To its left, the text "Click here:" is followed by a blue "Book Now" button. On the right side of the page, there is a "Reservation Form" section with fields for Name, Email, Phone Number, Reservation Date, Reservation Time, and Number of Guests. Each field has a corresponding label above it.

## **REVIEW PAGE (REVIEWS.HTML):**

- 1.** A designated section titled "Customer Reviews" will allow the customers to share their reviews about the restaurant.
- 2.** It contains a background picture.
- 3.** Below the title, it contains a form for the review that will ask for the customer name, rating between 1 to 5 for the restaurant and review like how was their experience.
- 4.** At the bottom of the form, it contains a submit button with a blue color.
- 5.** After clicking the submit button, the review will be displayed below the review form.
- 6.** The Mobile\_Menu ensures the page is accessible and navigable on smaller screens.
- 7.** All styling i.e. adjusting the size of background picture, font colors, padding etc. is done in the Style.css file.

## REVIEW PAGE (REVIEWS.HTML)

The screenshot shows a web page for a restaurant. At the top, there's a navigation bar with links for Home, Menu, About, Book a Table, Reviews, and Contact, along with a phone number (+923478990987). The main title "Customer Reviews" is centered above a form. The form includes fields for "Name:" (with a placeholder), "Rating (1-5):" (with a dropdown menu showing "1"), and "Review:" (with a large text area). Below the form is a blue button labeled "Submit Review". At the bottom of the page, there's a link "All Reviews". The background features a dark wood texture and some food-related images like a bowl of beans and a bowl of red lentils.

## **CONTACT PAGE(CONTACT.HTML)**

- 1.** The top menu lets customers easily move to other pages like home, menu, about, and more.
- 2.** It shows the restaurant's phone number, email address, and location (123 main street, Islamabad, Pakistan).
- 3.** There's a form where customers can enter their name, email, subject, and message to contact the restaurant.
- 4.** The page has a food-themed background, making it look attractive and matching the restaurant's style.
- 5.** The page makes it simple for customers to get in touch either by using the form or directly through the contact details.

## LIST OF TECHNOLOGIES USED

### **STYLING FILE (STYLE.CSS)**

- 1. Background styling:** Css adds visually appealing backgrounds to sections like hero, menu, reviews, and contact using background images, fixed attachments, and brightness filters.
- 2. Text styling:** Font families, sizes, colors, and text shadows are used to enhance headings, paragraphs, and links, ensuring they match the theme and are readable.
- 3. Form customization:** Forms are styled with padding, borders, rounded corners, and hover effects to improve usability and appearance.
- 4. Responsive design:** Media queries adjust font sizes, layouts, and visibility of navigation menus for devices with smaller screen sizes.
- 5. Layout and alignment:** Flex box is used for aligning content like menus, hero sections, and forms, ensuring proper positioning and spacing.

### **JAVASCRIPT**

JavaScript is used in different places while creating the website.

THE END
